

Considerable advantages for the user

# LED Guide-Light System

Our new developed construction lighting system in LED technology offers the following advantages for the user:

Up to 70% of energy savings opposite the previous technology

Never again electric light bulb failure

All lights are identical to construction (low spare part storage)

No separate control device or no connection box more inevitably

Polarity reversal protection

Very fast mounting

Exhaustive, steady illumination of the lights

Able of extension up to 20 lights

## Guide-light system type AL 12 V DC LED

The system encloses 10 lights, Ø 200 mm, yellow, with 13 m cable and plugs as well as a power supply cable.

The battery feed occurs at the end of the arrangement. Operation tension 12-24 volts DC, automatic day/night adaption system serially.

The construction lighting system works precisely like in the RSA 95, point 3.2.2 (4) described: "All lights go on successively and switch-off together again. With darkness a yellow permanent light must be laid under."
